Remote Power

Secure Power

Continuing to transform the way businesses think about energy production

Ultra-low emission and low maintenance Capstone turbines and microturbines are used in stationary distributed power generation applications including cogeneration, resource recovery, secure power and hybrid electric vehicles (HEV). With systems scalable from 30 kilowatts to several megawatts that can run on natural gas, liquid fuel or renewables, Capstone units are the answer for organizations concerned about high energy costs, power quality and reliability, energy efficiency and reduced carbon footprint.
